SHOOTER FIRST

POWERED BY MASABA INC.

PRODUCT INNOVATION

PATENT PENDING DESIGNS

We specialize in custom-built steel target systems and range equipment engineered for shooters who demand uncompromising performance. Using ballistic-grade SR500 steel, advanced fabrication, and modular designs, we can create everything from one-off targets to complete training systems.

PRO-SERIES

NO BOLTS, NO WELDS, NO TOOLS
PATENT PENDING DESIGN

If you have any familiarity with the use of Steel Targets, you know that targets inevitably fail at bolted/welded connection points; often rendering the target useless.

SHOOT-TO-RESET

MULTI-WEAPON, SHOOT-TO-RESET
SYSTEM | [PROTOTYPE DEPICTED]

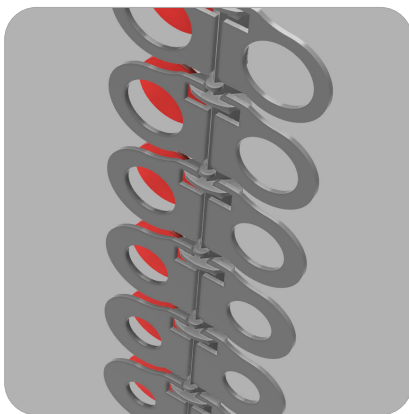

Quick-Swap targets (size, shape, placement). No ropes or chains and bars to reset targets. Opens up rifle engagements from long distances.

MODULAR GANTRY

INDOOR/OUTDOOR TRNG SYSTEM
(HOSTAGE SIMULATOR DEPICTED)

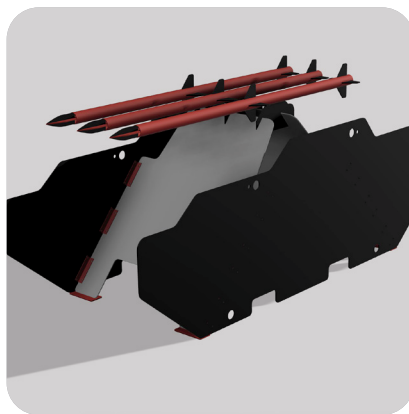

Target system designed for indoor and outdoor ranges featuring quick-swap swinging and/or shoot-thru targets.

MODULAR DUELING TREE

WITH QUICK-ATTACH/DETACH
"REDUCTION" PLATES

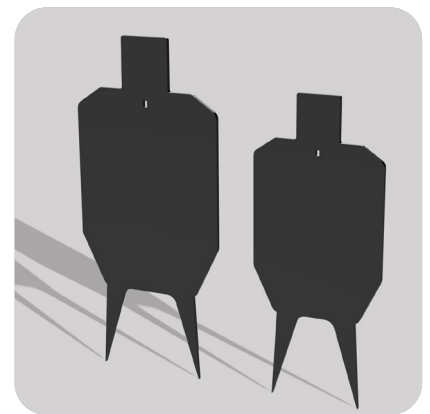

Quick-add reduction plates. Can be ordered to customer specifications. Handicap the "better shooter". Create challenges with various arrangements.

CUSTOM TARGETS

DESCRIBE WHAT YOU NEED AND
WE CAN ENGINEER THE SOLUTION

Big or small we can manufacture targets that range from simple and small, to full scale vehicles, aircraft and marine vessels.

NAME YOUR SHAPES

TARGETS AND RANGE EQUIPMENT
ENGINEERED RANGE FACILITIES

If you have target manufacturing needs under you own label, or would like to move in that direction, inquiries are welcome. We have almost 400,000 sq' of fabrication facilities.

SHOOTER FIRST

POWERED BY MASABA INC.

“PRO SERIES” BEST OF BREED

The Pro Series was developed with (3) fundamental mechanical design constraints

1. No Bolts | 2. No Welds | 3. No Tools

Operational considerations included:

- The ability to withstand Pistol or Rifle impacts Top to Bottom
- Safe Fragmentation Dispersion
- Modular Design for Add-ons and Multiple Target Options
- Ease of Component Replacement
- Transportable

PRO-SERIES

NO BOLTS, NO WELDS, NO TOOLS
PATENT PENDING DESIGN

SR500 Armored Steel on all components facing the Shooter to include all stand components.

System can be manufactured from either 3/8" or 1/2" SR500 steel depending upon customer operational requirements.

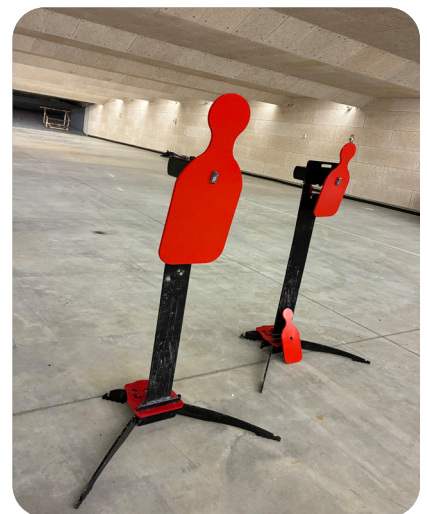

Fully armored design enables use of various shapes and sizes of reversible targets.

Target & Stand weight:
Approx 140 lbs with 3/8" steel

Frangible ammunition is highly recommended for closer range & safer engagements.

PRO SERIES UPGRADE OPTIONS

One of the core concepts of the “Pro Series” modular training system is to create a family of options that allows shooters and trainers to effortlessly and seamlessly swap-out components. As Shooter First develops additional user-driven modules, a multiplicity of presentations and shooting challenges can be created.

HOSTAGE-TAKER TARGET

QUICKLY ADD A 6" OVER-THE-SHOULDER TARGET TO THE SYSTEM

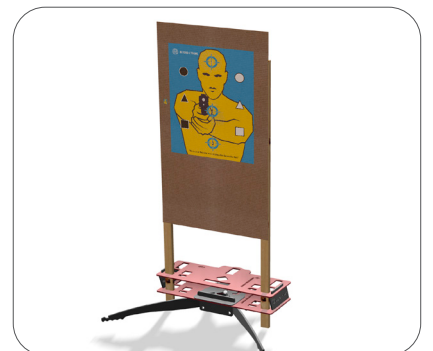

No-welds design. We have eliminated the need for bolts or tools to attach the swinging (shoulder-to-shoulder) target.

ARMORED MULTI-STAND

VERSATILITY & RELIABILITY

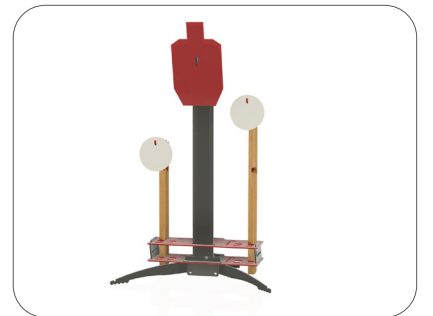

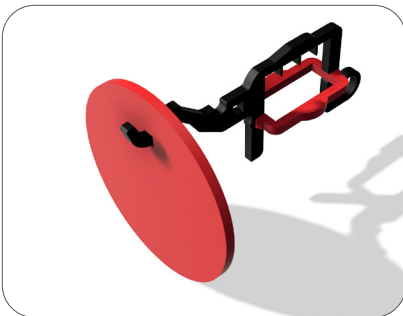

Drop in place armored stand. Use the existing stand legs & armored pole. Or use combinations of the existing armored vertical post, (2 or 3) 2x4's, 1x2's or 2x2's @ standardized 18" or 24" widths for quick-swap paper target usage. This stand is going nowhere in windy conditions.

2x4 SHAPES HANGER

QUICK-ATTACH HANGER

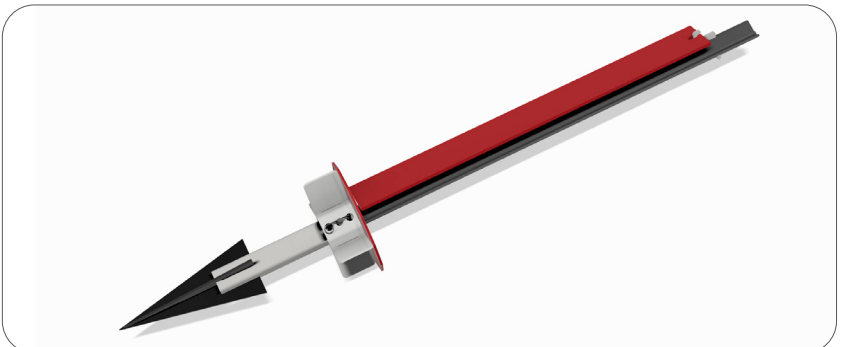

Easily affix the hanger and locking bracket to the top of standard piece of 2x4 lumber and slide it into our multi-stand, hang your steel target shape and go. Holes for carriage bolts, or chain hooks on the hanger for DIY setups. Notch for hanging armor (armor sold separately).

“DIRT SPIKE”

ROBUST, ARMORED POST

Drive this spike into the ground with a standard fence post driver and you can have a semi-permanent post to heavy targets in uneven terrain locations (Hillsides, washes, rolling terrain).

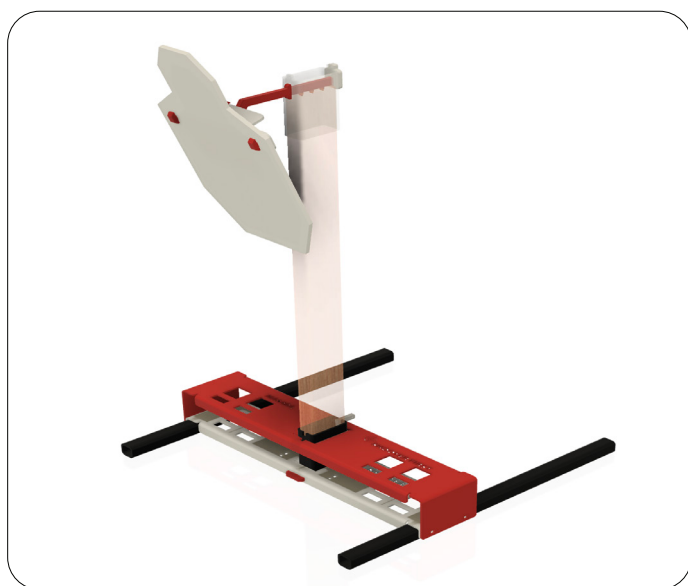

SPORTSMAN SERIES

SHOOTER FIRST
POWERED BY MASABA INC.

The Sportsman Series Target is a high-quality, lower cost alternative to our "Pro Series" System.

SPORTSMAN

SR500 3/8TH'S 24"X 12" HANGING SILHOUETTE

The Sportsman target is made from 3/8" SR500 steel, swings at 20 degrees, and hangs freely. Armored thru-pins affix the target to the hanging bar (no bolts to break, rust, or tighten). Reversing the target involves only the removal and re-attachment of snap links situated safely behind the target.

The target easily affixes to a standard 2x4 that is held in place by our no-tip multi-stand. The stand adapts for training with paper targets by sliding either 1x2's or 2x2's into pre-configured holes at 18" and 24" widths.

Total weight: Approx 60 lbs.
Optional .5" SR500 plate available

NO LIMITS MODULAR GANTRY

This target system was originally conceived after numerous conversations and on the range live-fire testing with highly experienced Law Enforcement Sniper trainers. They wanted a system that would enable them to conduct precision marksmanship training on limited distance ranges.

LE SNIPER TARGET PACKAGE

FULL HEAD - 50% HEAD PRESENTATIONS

When set at 100 yards, this training package is designed for precision engagement of 10 various sized targets calibrated to visually represent their perceived appearance at 75-250 yards respectively.

When set at longer distances the system simulates a proportional reduction of the target presentations as follows

125 yards:
100-125-200-250-300

150 yards:
125-200-250-300-350

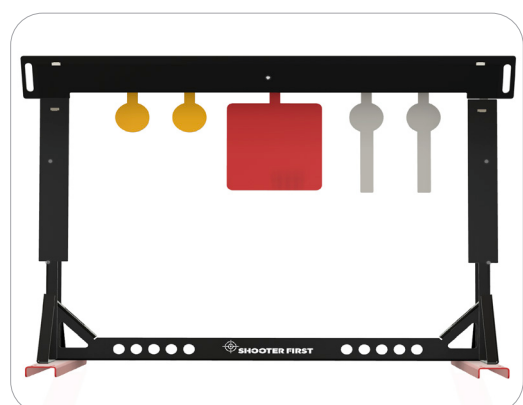

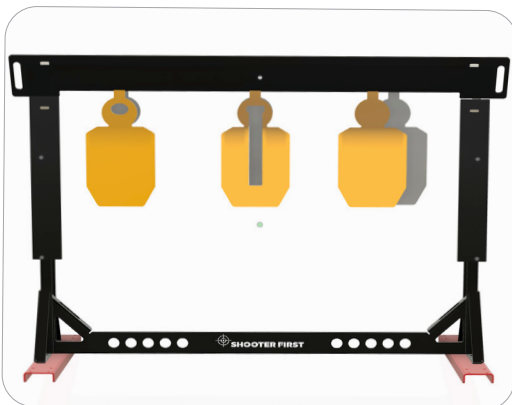

200 yards
150-200-250-400-500

VERSATILITY

MULTI-WEAPON / MISSION TARGET PACKAGES

We refer to this training gantry as our “No Limits” system because the uniquely designed armored hanger frame can be reconfigured to a wide variety of quick-change target options and challenges suitable for “scenario” training. Custom target designs include any combination of user defined hanging / swinging plates and “Shoot-Thru” configurations of various shapes and sizes.

Optional industrial wheeled casters facilitate easy system maneuverability on indoor ranges. Our use of ½” SR500 steel makes the system suitable for both Rifle and Pistol Training. For indoor ranges, we strongly recommend the use of frangible ammunition.

SHOOTER FIRST

IPSC

28" | 42" POPPERS

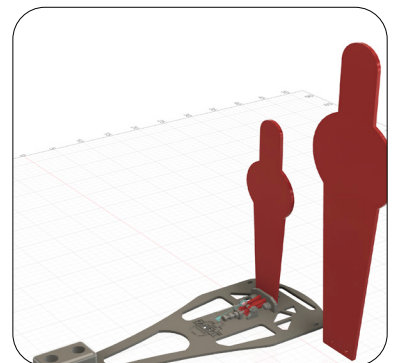

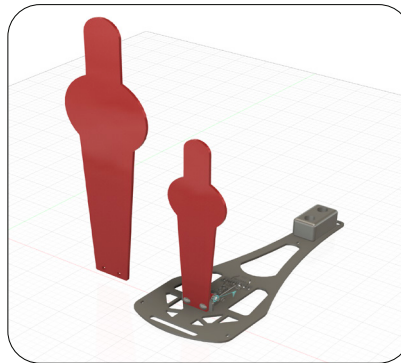

Our IPSC regulation-sized Pepper Popper Targets are available in both 28" and 42" heights and both the target and base plates are manufactured from SR500 steel.

Pictured below are a custom-designed set of IPSC Poppers we designed for the "Sand Pit Gun Club" and incorporated their logo into the base.

IPSC REGULATION TARGETS

SR500 TARGET AND BASE

Targets can be calibrated to fall when struck by a variety of pistol, rifle or shotgun rounds and can be adjusted to require specific shot placement as well as multiple shots to cause the target to fall.

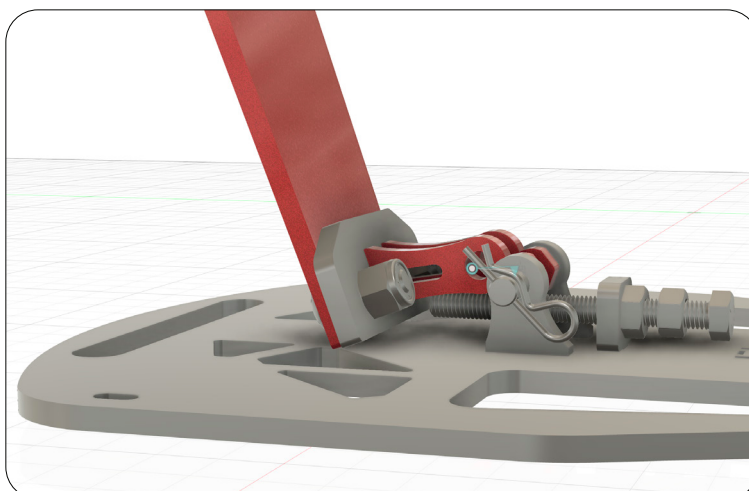

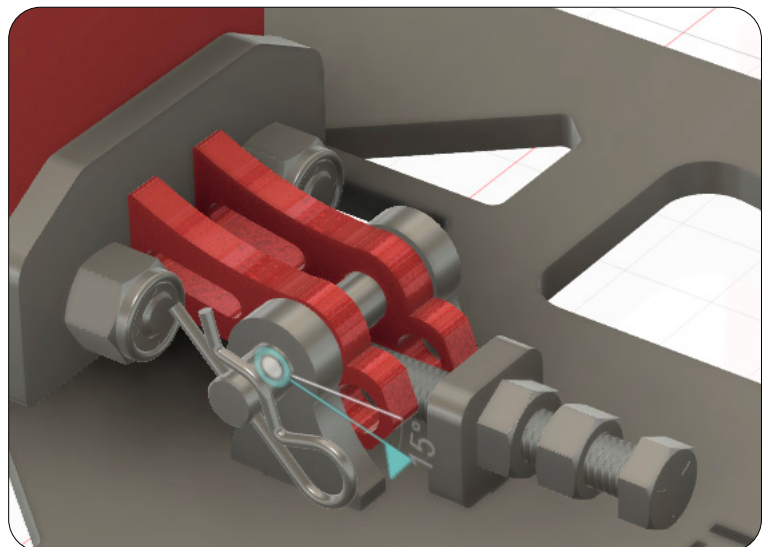

FALLING OR STEADY STATE

UNIQUE DESIGN

Design includes a quick-change pivot pin to enable users to leave your (falling target) calibration setting in place and change the target to a (no falling) static setting in seconds.

Placing the target into a fixed position (indexed forward at 20 degrees) requires only removal of a single pivot pin, move the target into a lower position and replacing the pin. Reversing the process returns it to the calibrated falling position.

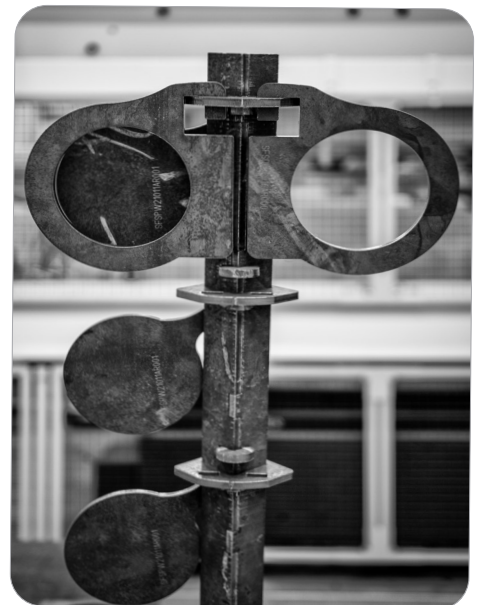

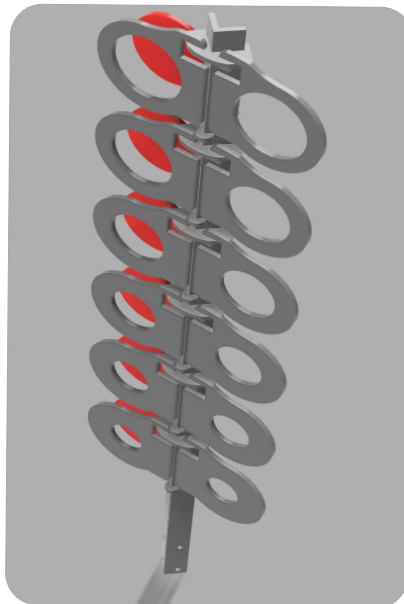

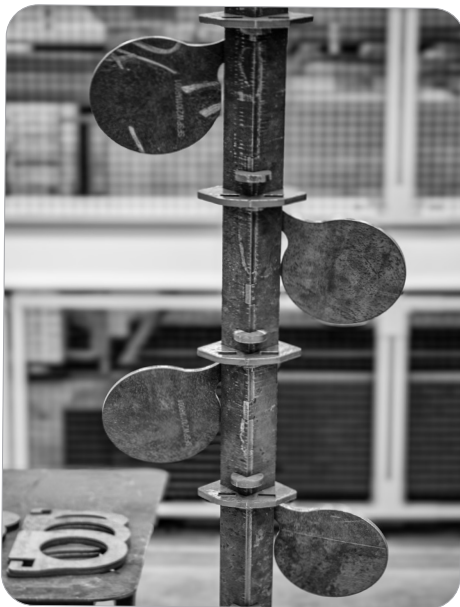

SHOOTER FIRST
POWERED BY MASABA INC.

NEXT LEVEL DUELING TREE

Dueling trees provide Instant Feedback. Every hit produces a loud “ping” and visible paddle movement. Shooters immediately know whether they made a hit. No need to walk downrange to score.

Head-to-Head Competition

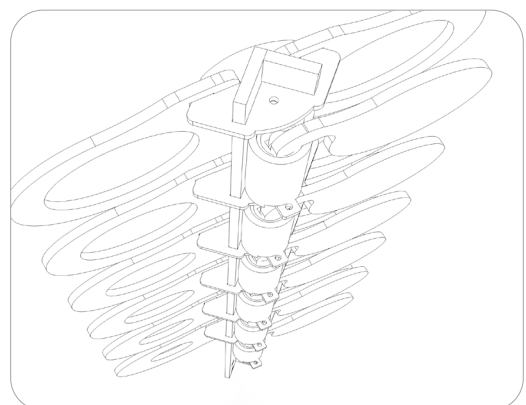

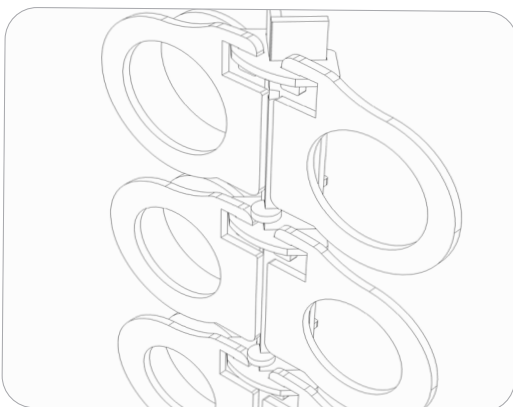

The dueling tree is one of the few targets designed specifically for two people to compete simultaneously. We’ve added additional versatility and challenges by designing a dueling tree with optional quick-add “reduction plates” that require the shooter to deliver additional accuracy under pressure.

MODULAR NO WELD CONSTRUCTION

TARGETS | REDUCTION PLATES | SUPPORT TUBES ARE EASILY REPLACED

All shooter facing metal is made with SR500 3/8” armored steel. Targets pivot on shock isolated TPU cylinder buffers.

SHOOTER FIRST
POWERED BY MASABA INC.

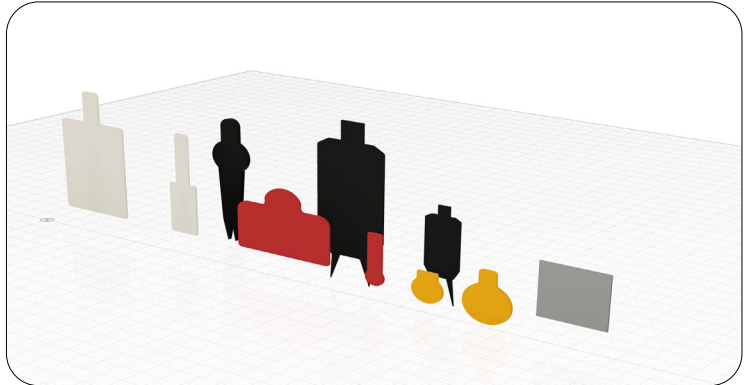

CUSTOM DESIGNS

We can design and manufacture plates in virtually any size, shape, and hole patterns using 3/8" or 1/2" SR 500. There is a minimum order quantity on custom designs.

CUSTOM SHAPES

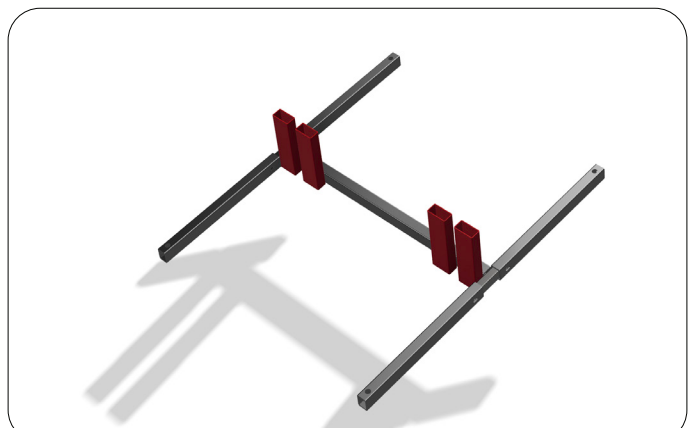

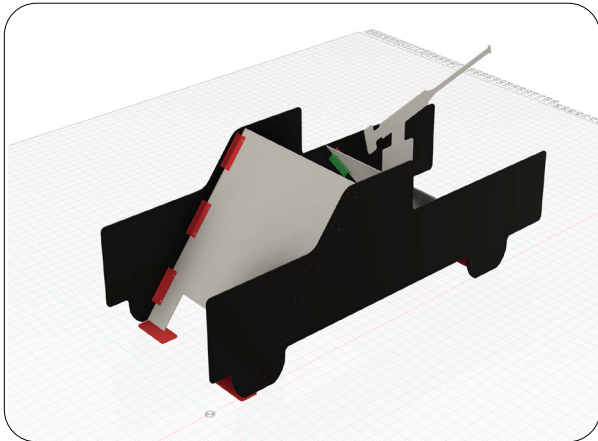

SR500 3/8" & 1/2" SR500

We can address your unique training requirements.

CAPACITY AND ABILITY

WE HAVE THE EXPERIENCE, THE EQUIPMENT & FACILITIES TO MANUFACTURE HIGH VOLUME, LARGE OR SMALL TARGET SYSTEMS PER CUSTOMER SPECIFICATIONS.
